

## DATA RECOVERY CENTERS

### A SECURE FACILITY

- 24/7/365 on-site security
- VESDA monitoring system
- Biometric and RFID access only
- SAS 70 certification in process
- Web viewable, password protected security camera system on site, including 36 cameras and a 120 day retention of footage
- Raised floor with high weight loads
- Steel roll-down doors on all entries
- Windows are protected with honeycomb steel mesh capable of withstanding a 200 mph projectile
- Full roof access and rights
- Roof strength is comparable to a parking deck
- 17-inch thick reinforced concrete exterior walls
- Security fencing surrounds the building and parking lots

**SECURED &  
HARDENED  
COLOCATION  
FACILITY**

### PLENTY OF SPACE

- 30,000 square feet of raised floor with 20,000 more coming Summer 2009
- Accommodates your current needs and has the capacity to grow with you as your business and equipment expand. A wide range of options are available:
- 1/2 cabinet
- Full cabinet
- Multiple contiguous cabinets
- Custom cages, available by the square foot
- Private suites for office or disaster recovery

### ALL THE POWER YOU NEED, GUARANTEED

- Colo5 guarantees that you have all the power you need with our 99.999% service level agreement (SLA)
- We have ultra-reliable uninterruptible power service (UPS) for continuous availability. All have automatic backup systems and service contracts on all equipment to keep them in peak operating condition
- UPS systems provide true redundancy and performance. Maintenance bypass on each UPS is now completed
- Independent Liebert systems for true redundancy
- The entire facility is backed by generators and UPS units even during an area outage
- Multiple diesel generators with automatic transfer switches on standby
- Generator capacity is equal to building utility service
- Should commercial power fail, the automatic transfer switches (ATS) immediately activate the generators. The ATS will monitor the electric feeds and transfer the loads to the generators once the feeds are stable. The UPS systems will then keep your equipment fully powered, preventing resets
- Access as much power as you need without paying for excess space to get it
- Power is available in most common voltages
- We can add as much power as necessary with additional service entrances

### A NETWORK OPTIMIZED FOR PERFORMANCE AND SPEED

- Carrier neutral environment; access to multiple providers
- Our premium gigabit Ethernet network—optimized for performance and with diverse entrances for best path—directly connects you to multiple tier 1 providers
- The Colo5 premium network offers the redundancy and reliability of BGP. This multi-carrier network is enhanced with intelligent routing that identifies the absolute fastest route across Internet backbones, improving performance by as much as 15 to 25 percent
- If you prefer to use an additional carrier(s), we can cross-connect you to multiple different providers serving our facility
- Cabinets can use two network feeds using Layer 2 and Layer 3 redundancy, so if the primary connection to you fails, you are still up and moving data
- Each of these network connections to Colo5 is served from a separate switch for redundancy
- We never cut corners on power
- Get 100% of what you pay for
